APPLYING LABELS IN NW ILLINOIS

For nearly half a century, LabelMill in Savanna, IL has personified quality craftsmanship and customer care. The company began as Mills Machine in 1976, a general machine and tooling shop, and transitioned over the years to a custom machine design and manufacturing business. In 1989, the LabelMill brand was born, focused on designing and manufacturing custom label applicator solutions for the packaging industry.

New technologies and improvements have greatly influenced the development of the LabelMill product line, keeping them on the cutting edge. In 2014, LabelMill expanded designing and building a new, 50% larger facility with state-of-the-art technologies to enhance their design and production process, further their market position, and to expand their reach.

Today, LabelMill offers a comprehensive range of semi-automatic, fully automatic, and print & apply industrial label application systems. Competing with about 12 other North American label applicator manufacturers, they design, fabricate, assemble, and test solutions from concept to completion. LabelMill sells internationally to a variety of industries from consumer products and pharmaceuticals to electronics and aerospace.

The LabelMill staff offers their customers decades of experience in creating automation that is up and running quickly and keeps the production line moving.

"Through our employee's dedication and hard work, LabelMill is succeeding in ways 30 years ago, we never could have imagined. Our work doesn't just enrich our own lives, but it enriches our community and our customers."

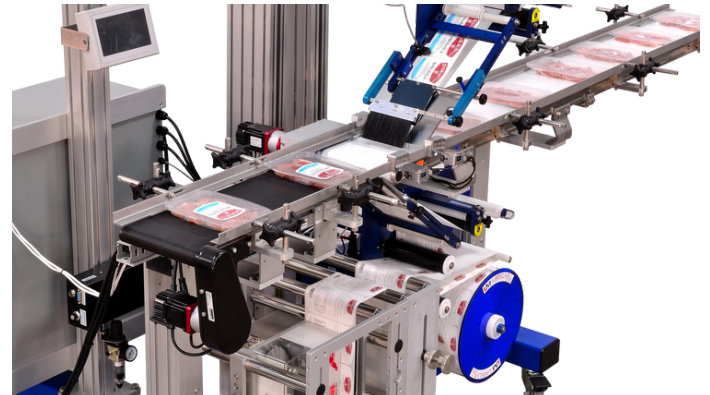

Phillip Mills, President

LabelMill products can be purchased through one of their distribution partners. Their applicators can be found throughout North America, including Mexico and Canada, and have been produced for startup entrepreneurs, small mom and pop shops, and Fortune 500 companies. All LabelMill products are designed and built entirely in the USA. The company is large enough to provide a quality product but small enough to care.

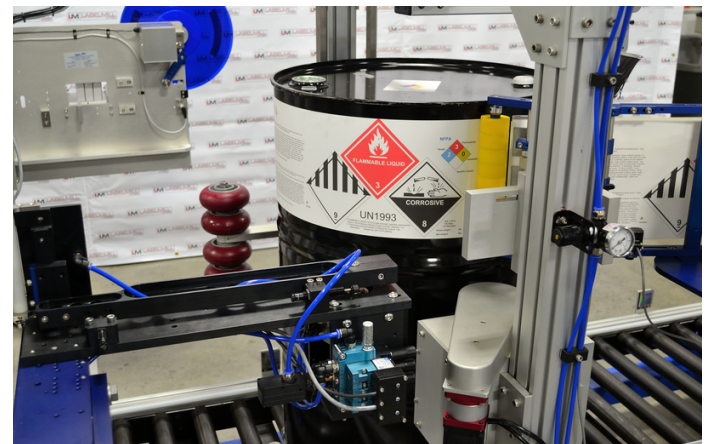

In addition to their standard line, LabelMill designs and builds custom labeling equipment, all done in-house from the ground up, that can easily integrate into nearly any new or existing production line. Their skilled and energetic employees, several who have been here for 15+ years, design and manufacture tailored solutions utilizing 2D & 3D drafting software, including SolidWorks, Haas 3 & 4 axis CNCs & lathes.

LabelMill has been developing automation systems for over 30 years. One new offering is their fully automated 55-gallon drum label applicator system. Empty drums are automatically loaded onto one of four staging conveyors by a robot to have labels applied via a "trap-and-wrap" process. Once labeled, the drums exit the conveyor line to move on to the next step in production. A video of this and other products can be found on LabelMill's web page and YouTube channel.

LabelMill is a member of the Illinois Manufacturing Excellence Center and the National Federation of Independent Business. Interested in working at LabelMill? Applications are accepted on a rolling basis for assemblers, general labor, and CNC technicians.

The 1510 Synchronous Feed System applies labels simultaneously to the top and bottom of an item, for example, a top label details the name of the manufacturer and product, and a back label details nutritional information.

Labels are applied to an empty 55-gallon drum moving along an automated conveyor.
